A Better Way to
Manage Urolithiasis
& Urinary Health

Potassium Citrate Tablet for Dogs and Cats

PRN
PHARMACAL

Manage and maintain urinary health in dogs and cats for pennies a day

Urolithiasis (recurring urinary stones) is a common problem in dogs and cats, especially in male dogs approaching middle age. Published research has shown a marked increase in the incidence of calcium oxalate (CaOx) stones in both dogs and cats.¹ Some breeds increasing in popularity are most susceptible to these stones.² In fact, the total number of pets at risk may be higher than documented. As surgery is often the only treatment option, urinary health management should be the first line of defense.

Pets at risk produce calcium and oxalate, which can lead to stone formation. Liver-flavored CitraVet™ tablets each contain 675 mg of potassium citrate to increase citrate levels in the bladder. Calcium then binds to the citrate instead of the oxalate, which could result in the formation of calcium oxalate stones.³ Other less common stones such as urate and cystine can also be controlled with the same mechanism.

CitraVet's supplemental potassium citrate also increases urine alkalinity. This alkaline environment is easily monitored and can also further inhibit oxalate stone formation in the bladder.

CitraVet can also be used as part of a maintenance program to support overall urinary health in dogs and cats. It's packaged to be a cost-effective part of your total management program for at-risk patients.

Promoting Urinary Tract Health

Up to 70% of uroliths in cats are recurring calcium oxalate

1 Minnesota Urolith Center, University of Minnesota College of Veterinary Medicine, www.urolithcenter.org.
2 American Kennel Club 2010 Dog Registrations, Cat Fanciers Association 2010 Registrations.

CitraVet™ Benefits

Prevention

Potassium citrate formulation is recommended for dogs and cats with recurring stones and is used to support urinary tract health

Convenience

Smaller, scored tablets make dosing easy for any size dog or cat

Palatable

Dogs and cats like the liver-enhanced flavor

Feeding Options

Can be fed as a chewable tablet or crumbled over food

Reduce Inventory

You can stock one product to meet the needs of both dog and cat owners

From A Name You Trust

You know PRN® Pharnacal for our quality products and our commitment to your success

Up to 35% of uroliths in dogs are recurring calcium oxalate

CitraVet™

A dietary supplement to address urolithiasis and support urinary health in dogs and cats

30% smaller tablets
are perfect for dogs
and cats

CitraVet Liver-Flavored Chewable Tablet for Dogs and Cats

is recommended for dogs and cats prone to recurring calcium oxalate stones or low urine pH. CitraVet is also used to support urinary health in dogs and cats.

CitraVet is suitable for dogs and cats.

Directions for use as an aid in the management of urinary tract disorders:

Feed one tablet per 10 kg (22 lbs.)

Feed ½ tablet per 5 kg (11 lbs.)

Feed ¼ tablet per 2.3 kg (5 lbs.)

May be offered free choice orally to dogs and cats or crumbled over food. CitraVet is recommended to be given every 12 hours or as prescribed by a veterinarian. Follow-up visits are recommended to monitor the urine pH and blood values of the pet.

Guaranteed Analysis

Each tablet contains:

Potassium Citrate – 675 mg

Also contains dried liver flavoring

Caution:

Federal law restricts this product to use by or on the order of a licensed veterinarian.

STORE IN A TIGHTLY SEALED CONTAINER AT ROOM TEMPERATURE (59–86°F)

KEEP OUT OF REACH OF CHILDREN AND ANIMALS

NOT FOR HUMAN USE

SCHEDULE VETERINARY FOLLOW-UP VISITS

USE ONLY UNDER THE CLOSE SUPERVISION OF A VETERINARIAN
