

# K•BroVet™ Chewable Tablets & Oral Solution

## Canine Formula Potassium Bromide with B Vitamins

Seizures, which can occur in dogs for many reasons, can be a frightening ordeal for pet owners. When a dog is diagnosed with epilepsy, K•BroVet™ can help.

K•BroVet was developed to provide a reliable source of potassium bromide that can be dispensed in the clinic, a convenience for both the client and the veterinarian. Potassium bromide has long been recognized as an excellent anti-convulsive for the alleviation of canine seizure disorders and is often considered the first option for dogs with idiopathic epilepsy. K•BroVet has also been formulated with B vitamins to support healthy neurological function.

K•BroVet can be used in conjunction with other therapies, including Phenobarbital, or alone, as the sole anti-convulsive. Unlike Phenobarbital, bromide is not a hepatotoxin, making it the treatment of choice for dogs with liver damage.

However you choose to prescribe K•BroVet, the advantages for your clients are compelling.

- Available immediately to your clients from your trusted staff
- Butterscotch vanilla flavored oral solution or liver flavored chew tab options
- Tablets contain Vitamin B12; oral solution contains B12 and B6
- Can be used in conjunction with Phenobarbital therapy
- Scored tablets make proper dosing easy
- Palatable, flexible dosing

### Available sizes:

#### K•BroVet Oral Solution 10 oz.
